Quarterly Manager Review

Performance of the two managers over the Q3 followed the same trend as that of the performance in the year to date, with Nomura slightly underperforming the index whilst Aberdeen have strongly outperformed.

Aberdeen's performance continues to be boosted by their asset allocation, in particular their significant underweighting of Japan, the worst performing market in Asia over the past 12 months. Nomura's stock selection continues to be good, but their asset allocation is affecting their overall performance. Underweights in Australia and Korea, and an overweight in China have all impacted on performance. Whereas the stock selection in Korea, Japan, China and Thailand have all had a positive affect on performance.

Overall the Trust is slightly down against the benchmark over Q3, however in the year to date the Trust has outperformed in NAV terms by nearly 4%.

Ten Largest Holdings as at 30.12.2009

Samsung Electronics	2.7%
Rio Tinto	2.5%
China Mobile	2.2%
Petrochina	2.0%
Swire Pacific	2.0%
BHP Billiton	1.9%
Canon	1.9%
QBE Insurance	1.8%
United Overseas Bank	1.8%
Toyota Motor	1.8%

*The benchmark for the Witan Pacific Investment Trust PLC is the MSCI AC Asia Pacific Free Index (£).

**The Net Asset Value figures value debt at fair value.

Important Information

The value of investments and the income from them may go down as well as up and you may not get back your original investment. Investment trusts can borrow money to make additional investments on top of shareholders' funds (gearing). If the value of these investments falls in value, gearing will magnify the negative impact on performance. If an investment trust incorporates a large amount of gearing the value of its shares may be subject to sudden and large falls in value and you could get back nothing at all. Emerging markets tend to be more volatile than more established stock markets and therefore your money is at greater risk. Other risk factors such as political and economic conditions should also be considered. Funds which specialise in investing in a particular region or market sector are more risky than those which hold a very broad spread of investments. Funds investing in overseas securities are exposed to and can hold currencies other than Sterling. As a result, exchange rate movements may cause the value of investments to decrease or increase. Some, or all, of the annual management fee may be charged to the capital of the Fund. Whilst this increases the yield, it will restrict the potential for capital growth. Net Asset Value ("NAV") performance is not the same as share price performance and investors may not realise returns the same as NAV performance. Where a fund holds a limited number of investments and one or more of those investments declines or is otherwise adversely affected, it may have a more pronounced effect on the Fund's value than if a larger number of investments were held.
